

# SOLUTIONTOKEN

A TOKEN FOR HUMANITY

**WHITEPAPER  
VERSION 1.0**

## Abstract

Cryptocurrency (referred to as 'crypto' from here on), refers to digital currencies that use cryptography for security. Crypto is designed to be decentralised and virtually immune to counterfeit, hacking, or fraud. With crypto, transactions are verifiable on a public ledger, and anybody can easily check a transaction's sender, receiver, and the amount sent.

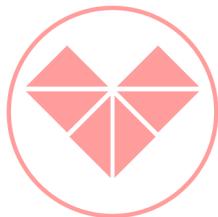

This whitepaper explains the vision behind and functionality of Solution Token, an ERC20 token built on the Ethereum blockchain.

Solution Token was conceived as an innovative way to bring about certain changes that the team believes will benefit the world in the aspects of humanitarian efforts, charity donations, and normalizing cryptocurrency as a part of life.

Solution Token's platform is based around four concepts which act as pillars to support each other, as well as the company's sustainability and functionality. These four concepts are the humanitarian program known as Operation Humanity, a mobile gaming application, the Water Solutions Program, and the Solution rewards wallet.

All four of these concepts are designed to facilitate community involvement and real-world usage, showing the people of the world that crypto and blockchain technology are here to stay, and can make a tangible positive impact in today's global society. Solution is not just another ERC20 token with a single functionality, but a multifaceted platform that will involve the entire crypto community.

We believe that Solution Token will be successful because of this platform, which encompasses both company revenue and rewards for users, as well as benefits for people in need across the globe. Not only will Solution Token provide solutions for global problems that humanity faces, but it will introduce crypto to new demographics as well as incentivize users to help others while simultaneously sustaining the company, and benefiting themselves.

# 1.0 Introduction

*The pieces that make up Solution*

## About Solution Token (SOLV)

Solution Token (SOLV) is an ERC20 token built on the Ethereum blockchain. Solution consists of three elements: mobile gaming, user rewards, and a humanitarian program. The gaming aspect will allow users to earn tokens through gameplay. People who decide to hold SOLV tokens in the Solution wallet will be rewarded KEY tokens for loyalty towards the sustainability of the company. The company has a humanitarian goal to provide solutions to global issues and people in need around the world, which is done through the Solution Program.

The goal of Solution Token is to aid causes and help solve humanitarian issues, along with disaster relief around the world. Solution Token's platform will be widely based around real world uses, with three out of the four concepts directly applicable to the real world. These three are the humanitarian program, water solutions, and interactive gaming. The only concept that does not directly interact with the physical world will be the Solution wallet.

Each concept of Solution Token works as a pillar, and each platform will benefit one another. The platform was created to be a win-win scenario which will benefit both users and non-users of Solution Token, along with the company. Solution Token aims to become a globally recognized brand and not just another "crypto company". By operating and presenting ourselves as a company with real-world application for humanitarian efforts, we hope that the world will come to see Solution Token as a normal part of life, and not keep the mental divide of being yet another cryptocurrency in the back of their minds.

For this to happen, the company needs to not only benefit users and non-users, but itself as well. No company will have a future if it cannot sustain itself, which is why Solution Token has created a module that will increase company revenue over time and allow it to continue their humanitarian efforts. Solution Token wants to set the status quo for current and future ICOs and crypto platforms to work hand in hand with real world utilization, ease the general population's apprehension about and aversion to cryptocurrencies, and narrow the mental gap between the two worlds.

## 2.0 The Platform

*The four concepts explained*

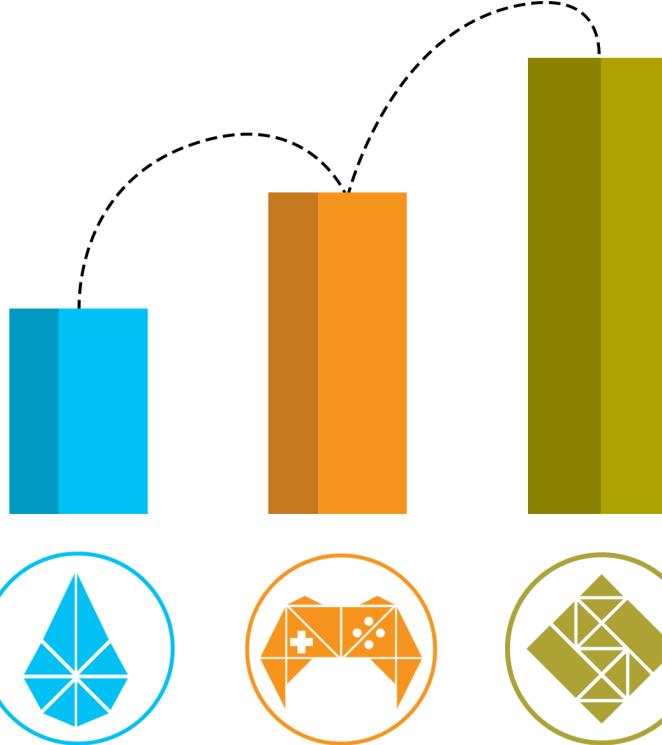

### ◆ Concept 1: Operation Humanity

Operation Humanity is Solution Token's way of setting the standard for donations of any sort in the future. One hundred percent of donations will reach their intended destination directly. By building a donation module on the blockchain, people will be able to make decentralised donations without having to worry about their hard-earned finances unintentionally funding cuts and administrative fees - or worse, embezzlement - by third parties. Users will be able to use our platform with full transparency, so that they can see who, where, and what their donation goes toward.

With decentralised donations and all funds reaching their intended recipient, many questions and concerns should come to mind - such as how will this be possible without operational fees. This, in practice, would cause long-term problems for the company due to operational expenses without any income to cover them. To solve this issue, Solution Token has decided to create a self-sustainable platform with which we can achieve a net income from our three other functions.

What's the best way to get everyone involved while simultaneously benefiting others, effortlessly? Our finding is that by having multiple correlated platforms we will be able to create a cross platform experience. By using one platform of Solution Token, it allows someone else to indirectly benefit from this use, even if they are using a different platform.

## Positive income from platforms

**Concept 2: Interactive Gaming - Purchases made through the gaming platform.**

**Concept 3: Water Solutions - Percentage of proceeds from selling water bottles.**

**Concept 4: Rewards Wallet - Monthly returns and maintenance fees**

## Relief Group Targeting

Educational programs

Food supplies

Orphanages

Animal shelters

Disaster relief

Clean energy

\*Depending on public interest, more categories will be added to this list

## **Getting started & implementation**

In a transparent manner, all funds that are donated will go directly to their intended recipient. The recipient has multiple options of how they are able to utilize these funds. For example, if the public decides to donate to an orphanage, prior to donations being made, Solution's humanitarian team will personally set up wallets and linked exchanges for the orphanage, giving the option to exchange them for Bitcoin or fiat through their local exchange. The Solution Token humanitarian team will not only assist in the process of setting up wallets and linking exchanges, but educate the organisation on how crypto works and how it will actually benefit them. By doing this, Solution Token will provide assistance in all of the steps necessary for the donated funds to be utilised.

## **Option of choice**

The public will be able to cast a vote towards which humanitarian issues they want to donate to first. Every month, the Solution community will be able to vote and build a pipeline of public issues that everyone believes should be assisted. By doing this, Solution will reach out to organisations in setting them up and explaining to them the steps to follow, and how we can help them utilise the donations that they receive.

## Concept 2: Gaming - Street QRed

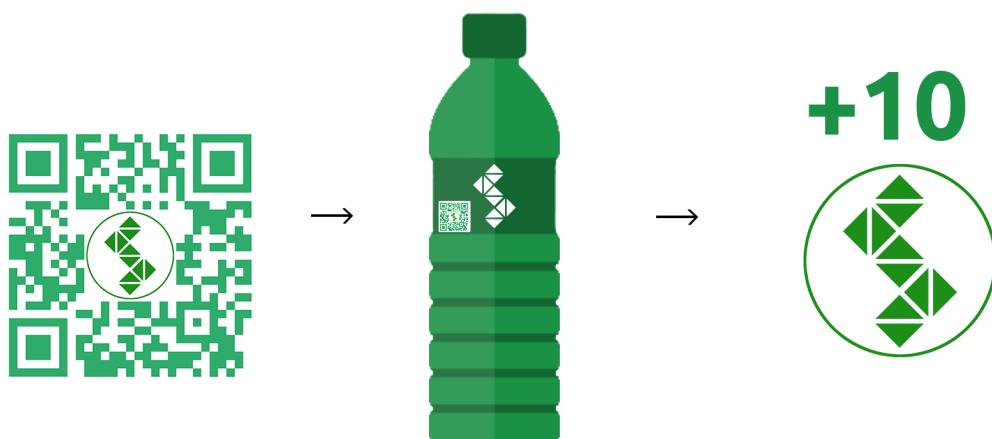

This peer-to-peer platform will bring users a fun and interactive way to enjoy gaming within the crypto realm. Street QRed will allow players to level up and consistently grow and modify their character while participating in events and competitions that will earn them rewards. Because it is a skill-based game, users will have the opportunity to generate an active income from their work and use of the game.

### Players can receive tokens in two ways

Option 1: Battling opponents will allow players to stake a certain amount of their KEY tokens against their opponent. The winner will receive the tokens that are wagered after the battle.

Option 2: Purchasing Solution water bottles will enable buyers to scan a unique QR code and redeem free tokens through a website, which in turn can be transferred into their gaming profile or their rewards wallet.

Street QRed will be a mobile game where users can battle each other, explore the virtual world, discover new creatures, and customise their avatars and companions. With an engaging character levelling system and a way for users to redeem in-game rewards as SOLV tokens, we will be able to change the way people game with the application of blockchain technology.

The idea behind Street QRed is for players to scan QR codes and discover a variety of creatures. These creatures will become your battle monsters, where your goal is to win battles and collect as many creatures as you can. The more battles you win, the more creatures you collect, and the more of an opportunity you will have to be recognised in the community and earn rewards for completing events and winning competitions. (Scanning any QR code gives you creatures but scanning solution QR codes gets you tokens)

The beauty behind this concept is that any person can log on and immediately start their journey. Although the grind is long, it is definitely worth it. With Solution's gaming platform, we are making it possible for the world to start utilising their mobile phones to generate a revenue stream, all while having fun and benefiting others in need.

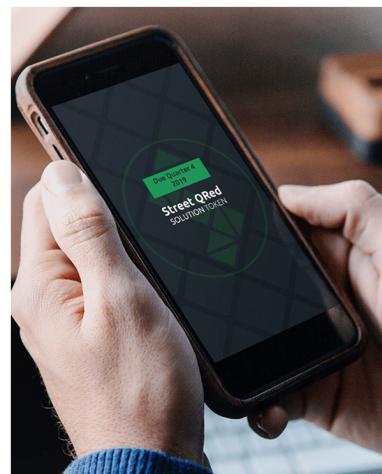

The concept that we envision for Street QRed is an application where users can grind endlessly. We will design a levelling system called Power that will influence the experience rate based on the status of their profile.

With Power comes great responsibility, and therefore we are implementing a subscription for platinum accounts to purchase Power on the application. Power and upgrades can be purchased with in-game currency, cryptocurrency, and fiat. Power will greatly increase the user's experience rate compared to a user with no beneficial status on their account. Power will have a main objective on the platform and will influence the creatures that users capture, how fast they level up, and how they can redeem rewards. A new user with a basic account has no limitations, but a user with an increased Power level will experience a greater benefit.

## Profitability for users and hosts

When winners receive their rewards from defeating opponents, three percent of their winnings will be sent back to the company to help fund operational costs and transaction fees. The rest of their earned prizes will go towards the winner's gaming profile. The player will then have the option of sending the tokens to their gaming profile to use on their character or transferring them to their wallet and/or exchange.

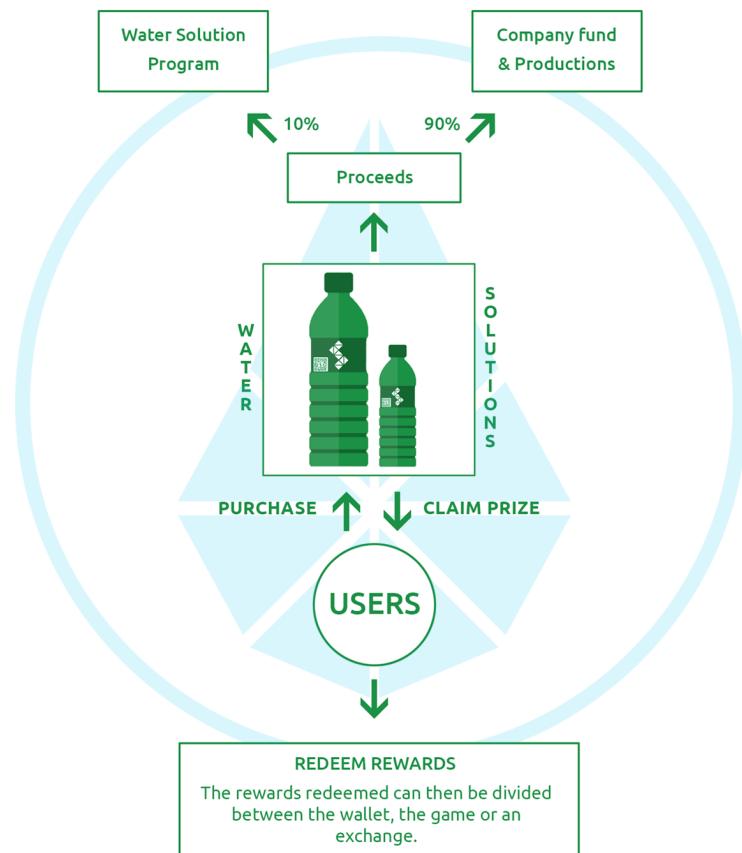

## Concept 3: Water Solutions

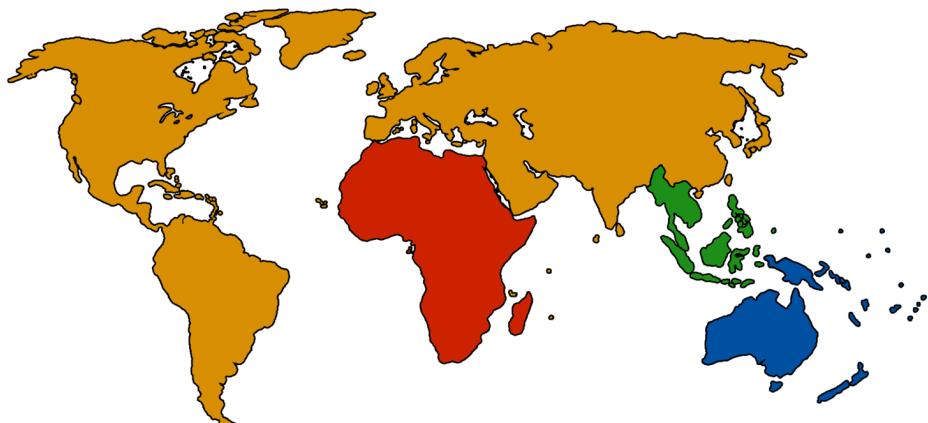

Bringing crypto to the point of real-world utilization and breaking this barrier will help bring Solution Token to new heights, as well as bring the world closer to mass adoption. Solution Token has conceived the concept of producing bottles of water to sell in stores worldwide. Solution Token believes that this will be successful based off of the benefits that the consumer will receive from purchasing Solution water bottles at their local store.

1. For each bottle purchased, 10% will be put towards building wells and other clean water sources in countries in need of water, which will assist resolute water crises throughout the future.
2. The consumer will also be able to scan the unique QR code on the water bottle to redeem a free prize, which will either be in the form of SOLV or KEY Tokens, through the Solution website. This will help engage people who are not familiar with crypto, and act as a first form of contact for a majority of consumers. There is no scarcity of people who have had thoughts of dabbling in the crypto space. Hand-in-hand, this concept will work to benefit citizens in need as well as quench people's thirst of being involved in the crypto community.

Running a productive real world business will also benefit the company in the form of generating a positive revenue stream back into the company for long term results and making the Solution project possible.

## TARGETED REGIONS OF INTEREST

### WORLDWIDE

- DISASTER RELIEF
- ANIMAL SHELTERS
- ENVIRONMENTAL CONSERVATION
- WILDLIFE PRESERVATION

### AFRICA

- FOOD SUPPLY
- ORPHANAGES
- EDUCATION PROGRAMS
- WATER RESOURCES

### SOUTHEAST ASIA

- FOOD SUPPLY
- ORPHANAGES
- EDUCATION PROGRAMS

### OCEANIA

- COMMUNITY WORK
- YOUTH PROGRAMS

## Concept 4: Rewards Wallet

The Solution Rewards Wallet will allow the user to hold Solution Tokens and generate KEY tokens. KEY tokens are a secondary token with a decreasing, capped supply.

The maintenance fee for holding the tokens is 3% of generated KEY tokens monthly, which will go back towards the company. The company will also invest into the platform to set an example with 50% of the tokens that are not sold at ICO, while the other 50% will go towards exchanges. The first monthly return of KEY tokens will go directly to a Solution program category of choice, which will be voted on by the public. The following monthly returns will go directly towards funding and operational costs of Operation Humanity.

### **KEY Tokens**

Under Solution, KEY tokens will be the counterpart to SOLV tokens. Similar to GAS and NEO, KEY tokens will be generated from holding SOLV tokens in a rewards wallet. Along with holding, other ways to obtain KEY tokens are as follows:

PURCHASING FROM AN EXCHANGE

REWARDS FROM OPERATION HUMANITY

REWARDS FROM THE GAMING PLATFORM

KEY tokens will act as the utility for Solution. KEY tokens will be capped at 325,000,000 tokens, with no more being generated after that amount is reached.

### 3.0 You are the Solution!

Why not help people in need around the world by doing what you currently do on a daily basis? Solution allows people to go about their everyday life, such as playing mobile games to simply buying a water bottle, while having a positive impact in someone else's life. Making use of your daily activity to have a positive instead of negative impact is the perfect solution. You are the solution!

### Connecting cryptocurrency and humanity

Assisting in breaking the barrier of mass adoption is what Solution is all about. Solution wants to make cryptocurrency a part of everyday life. Implementing blockchain technology can truly shape the future of our world. Solution will start creating options for people, which is what the world needs. When the Solution community grows, it will become self-sustainable in solving real world issues. When the community gets involved with Solution's platform, it will then become a catalyst to solve issues around the world, and ease the pain of those in need. While leading and proving that this is a working module, it will allow current organisations to adopt Solution's structure so that they too can produce a more effective result. Solution will allow real world organisations to build off of our platform and follow our module's structure.

### Merchandise

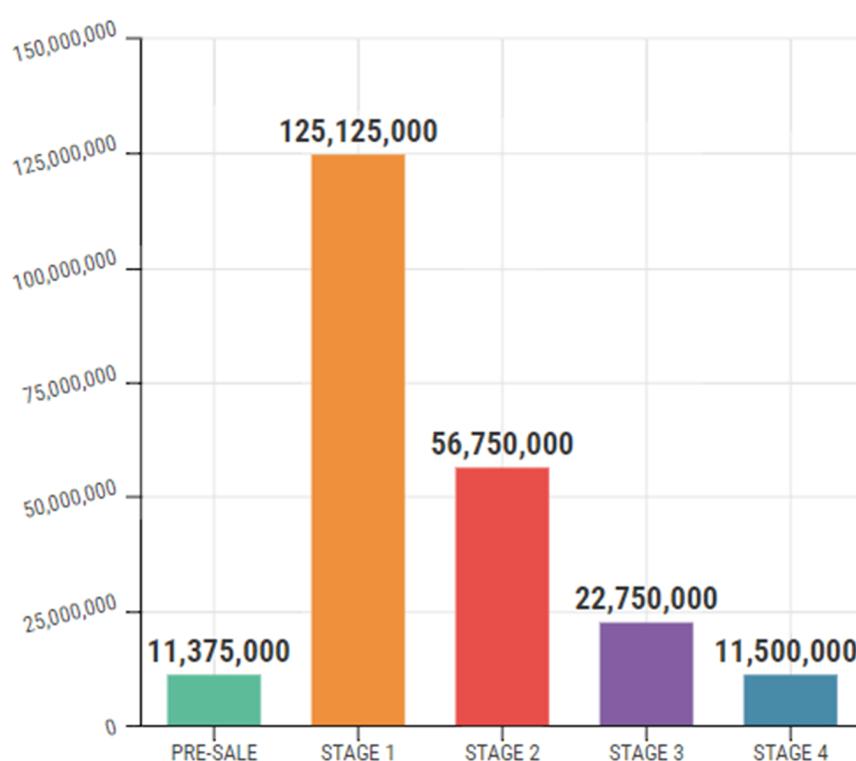

How would you like to buy Solution clothing and merchandise? Solution will be releasing a Shopify store post ICO so that every one of you can join in on the fun and become part of the Solution family. Solution will be releasing competitions throughout the year for prizes and giveaways. Anyone who has purchased a Solution item can participate. On top of that, you will be able to scan the QR code on any of the products to reveal a secret prize.

## 4.0 Solution Token Sale

### Token Distribution

Token distribution will be done in four stages, with the presale starting on the 20th of February, 2018. Solution Token's total supply will be 325,000,000. The company will be releasing 227,500,000 Tokens to the public.

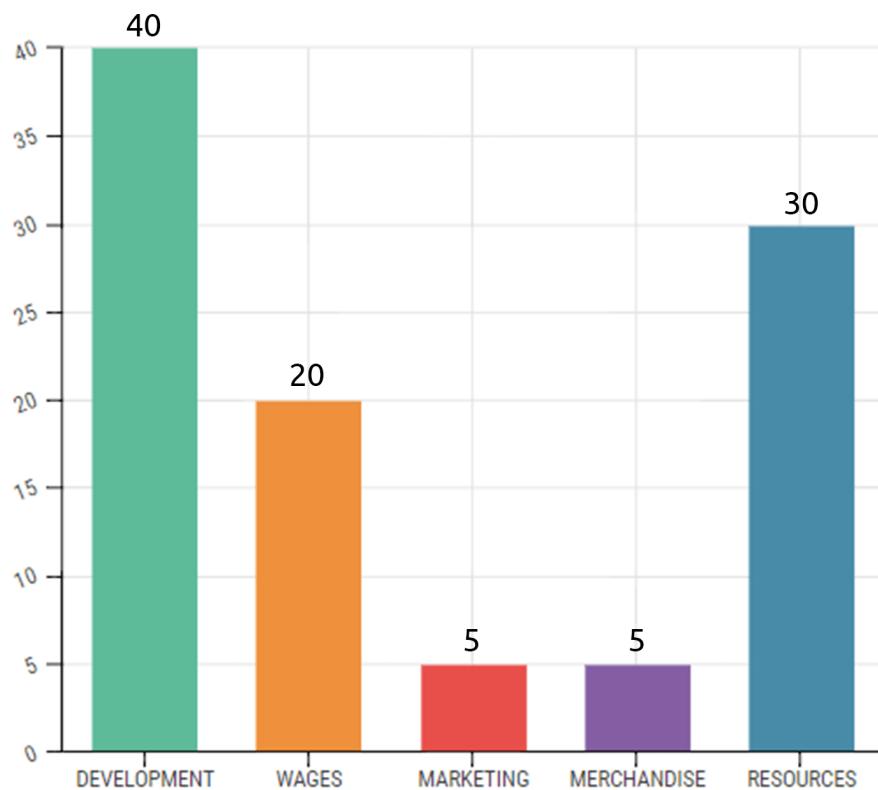

Presale: \$0.10 USD 11,375,000 SOLV	STAGE 1: \$0.13 USD 125,125,000 SOLV	STAGE 2: \$0.16 USD 56,750,000 SOLV
	STAGE 3: \$0.19 USD 22,750,000 SOLV	STAGE 4: \$0.21 USD 11,500,000 SOLV

## Fund Distribution

These funds will be going towards:

- Development of the platforms
- Wages for employees
- Company Expenses & Production

## Payments and transactions

Tokens will be bought via Ethereum (ETH) calculated to the USD price of sale, which will be automatically set and calculated by the smart contract.

## Presale

The presale will be listed on the 20th of March 2018. During the presale 11,375,000 SOLV will be available for purchase at 0.10 USD. The presale will run until ICO Stage 1 commencement or until the presale.

## **Founders and public trust**

97,500,000 tokens will go towards staffing and bounties along with founders' share. We plan to expand our reach to all corners of the globe, which will be made possible by large regional teams. The founders shares will be locked up for a 12 month period after the ICO is completed. Doing so will assist in the long term stabilisation of the token value and nature growth of volume.

## **Unsold Tokens**

50% of unsold tokens will be sold to selected exchanges, while the other 50% of unsold tokens will be held and dedicated to the first Solution event.

## **Why are we holding?**

This event will be called the "First Solution". These tokens will be held in the wallet to generate the first KEY Tokens.

We are doing this because we want to show the public an example of our working platform. This will allow the public to get involved by having the community vote on a humanitarian issue which 100% of all generated income through KEY tokens will go towards.

What happens to the rest of the KEY Tokens that are rewarded after the first month?

The rest of the returns will be going towards funding the costs of the humanitarian team, and also provide a positive cash flow for Solution. Doing this will ultimately allow donors to be exempt from admin fees.

## **Buying tokens at ICO**

When sending ETH to receive Solution Tokens at ICO, you will need to send them from an ERC20 compatible wallet. They CANNOT be sent from an exchange wallet such as Bittrex, Cryptopia, Kraken, etc. We will not be held liable for the loss of any funds that are sent from an exchange, and you will not receive your Solution tokens. Once the ICO is finalised, then you may be able to purchase and trade your tokens on any exchange that has Solution Token listed.

## **ICO compatible wallets**

You will need to send your funds from an ERC20 wallet such as MyEtherWallet (list a few more). Further instructions will be listed on the website, [www.solutiontoken.net](http://www.solutiontoken.net).

## **Exchanges**

The exchanges that we will be listed on post ICO will be announced once confirmed. Solution Token will be aiming to list on Cryptopia, Yobit and Coinspot as the first 3 exchanges.

DISCLAIMER: AIMING TO ENLIST EXCHANGES  
SUBJECT TO CHANGE THROUGHOUT ICO STAGES  
UNCONFIRMED INFORMATION

## **ICO Smart contracts**

A smart contract is a computer protocol intended to digitally facilitate, verify, or enforce the negotiation or execution of a contract. Smart contracts allow the performance of credible transactions without third party oversight. These transactions are by nature verifiable and irreversible, and immune to forgery.

## **5.0 LEGAL**

### **Registration & Operation**

Solution's country of registration and operations base will be in Thailand, and all ICO matters will be compliant under Thailand's rules and regulations.

### **Participation**

KYC TBD

### **Server downtime**

Server speeds may be negatively affected from maintenance or server upgrades. This may temporarily affect gameplay or use of the gaming application.

### **Blockchain dependency**

Any platform based on the Ethereum blockchain ultimately relies on the state of the Ethereum Network for its long-term success. Any unforeseen incident on the Ethereum Network could negatively affect Solution Tokens in terms of performance, stability, security, etc.
